

***Centrifugal pumps of metal
with high resistance
to wear for diverse
industrial fluids***

Technical data

- Delivery rate
 $Q_{\max} = 400 \text{ l/min}$
- Delivery head
 $H_{\max} = 48 \text{ m}$
- Temperature range
PMS: $0 \text{ }^{\circ}\text{C}$ to $+80 \text{ }^{\circ}\text{C}$
PMS-T: $-70 \text{ }^{\circ}\text{C}$ to $+170 \text{ }^{\circ}\text{C}$

Product features

- Centrifugal pump,
1- to 4-stage models
- Open impellers
- Port dimensions to
DIN EN 12157
- Immersion depths of up to 560 mm
- Available in various materials
- "Slurp" type models
for fluids containing trapped air

Main applications

- Machine tools
- Filtration systems
- Conditioning of coolants and oils
- Cooling systems
- Cleaning and degreasing installations
- Printing machines
- Erosion machines
- Wetting equipment and temperature stabilizers
- Surface coating
- Paraffin plants
- Optical machines
- Glassworking
- etc.

Fluids delivered

- Emulsions, also with chemical additives
- Oils
- Water with anticorrosion additives
- Waterbased paints
- Heattransfer oils
- etc.

Temperature range:

Standard version, PMS: 0 °C to 80 °C

Special material version, PMS-T: -70 °C to +170 °C

Special impellers are available for fluids with densities deviating from that of water.

Contaminants with a small grain size are permissible.

Special pumps for slurp operation are available for fluids carrying large amounts of air. They are available in sizes 9, 11 and 15.

Their special design provides for a continuous rate of flow even when fluids contain trapped air.

Design features

- sealless
- freefloating shaft supported only by bearing assembly in the motor
- open impellers
- 1- to 4-stage models
- connecting dimensions to DIN EN 12157
- immersion depths of up to 560 mm

Mechanical design

Component	Type PMS	Type PMS-T
Motor housing	aluminum	aluminum
Pump support	cast iron and steel	cast iron and steel
Pump bottom	POM	cast iron
Intermediate chamber	cast iron	cast iron
Impeller	POM	cast iron
Shaft	ETG	ETG
Splash ring	NBR (Perbunan)	steel
Antifriction bearings	radial deep-groove ball bearing with 2 side plates (2 Z) with permanent lubrication	side plate (1 Z) with special grease
Small parts (in contact with fluid)	steel	steel

Optional materials:

Special models of stainless steel are possible:

Shaft of stainless steel 1.4122 or 1.4571, pump parts on request.

Electrical design

The drive motors conform to VDE regulations as well as to European motor standards (DIN EN 60034-1/11.95) and the requirements of the CE mark.

Designs in conformity with non-European regulations, e.g. Canadian Standards Association (CSA), Underwriters Laboratories INC. (UL) or special requirements, e.g. the USA or Japan, are possible. Moreover, we also produce models for special operating conditions (e.g. exposure to humidity or dust).

The regular models have motor windings designed for continuous operation and connection to a mains voltage of 230/400 V ± 10%, 50 Hz in accordance with IEC 38/5.87.

On request the motors can be customized to all common mains values.

	Standard	Options
Degree of protection (DIN EN 60034-5/4.88)	IP 54	IP 55
Insulation class	F,B	F
Ambient temperature (DIN EN 60034-1/02.99)	max. 40 °C	50 °C and higher
Relative humidity (DIN 50015)	max. 92 %	95 % and higher
Site altitude (DIN EN 60034-1/11.95)	< 1000 m above sea level	on request
Electrical parameters	230/400 V, 50 Hz 255/440 V, 60 Hz	on request
Mains operation	three-phase	single-phase AC
Number of poles	2-poles	4-poles
Terminal box		
- layout (DIN EN 12157)	layout 1	layout 2, 3 or 4
- material	high-impact plastic	light metal
- cable entry (DIN 40430/2.71)	PMS 4 C, 5 B, 6 C, 7 B: 2x M 16x1.5 PMS 9 C, 11 C, 17 C, 20 C: M 16x1.5 PMS 15 D, 20 D, 30 D, 38 D, 48 D: 2x M 25x1.5	on request
		industrial plug-in connector
Protective surface coating	synthetic-resin lacquer, color: RAL 9005 (black, matt)	Special finish on request
Special protection		Motor protection (thermistors in the winding/PTC); fan cowl with canopy.

Installation and operation

The unit is installed upright. The maximum permissible level of fluid amounts to 20 mm below the mounting flange (cf. following drawing).

Dry running is not permitted. Before startup, fill the pump with fluid for pumping. There is only limited support for short-term operation without such fluid during the feeding operation.

Operation against dead head is possible.

Direction of rotation: counterclockwise, as viewed looking down on the motor's ventilation side.

Options

Model with extension tube
if immersion depth deviates from standard.

Order example

PMS 7 B-350

Model _____

Size _____

Immersion depth t _____

Please indicate electrical parameters, e.g. 230/400 V, 50 Hz.

When ordering spare parts, always indicate the 10-place serial number (see motor rating plate).

▶ Also available as “System Spandau” slurp model

PMS .. T pumps are suitable for fluid temperatures of -70 °C to +170 °C.

The data apply for fluids with viscosity of 1mm²/s at a density of 1 kg/dm³.

*) Pumps may only be operated at this level or higher.

The standard models of aircooled motors are supplied without a protective cover. The motors can also be provided with a protective cover if necessary – the respective safety regulations and valid machine protection laws must be observed.
Dimension “l” is then increased approx. 31 mm.

▲ Also available as "System Spandau" slurrp model.

Please note:
 All equipment may only be installed and/or assembled by qualified personnel.
 Observe existing safety regulations.

To avoid errors please consult our operating instructions.

¹⁾ Terminal box dimensions are some 20 mm larger in the case of versions for CSA/USA requirements and higher insulation classes or when the free ends of thermistors are fed into the terminal boxes.

²⁾ Immersion depth 280 mm only with PMS38D.
